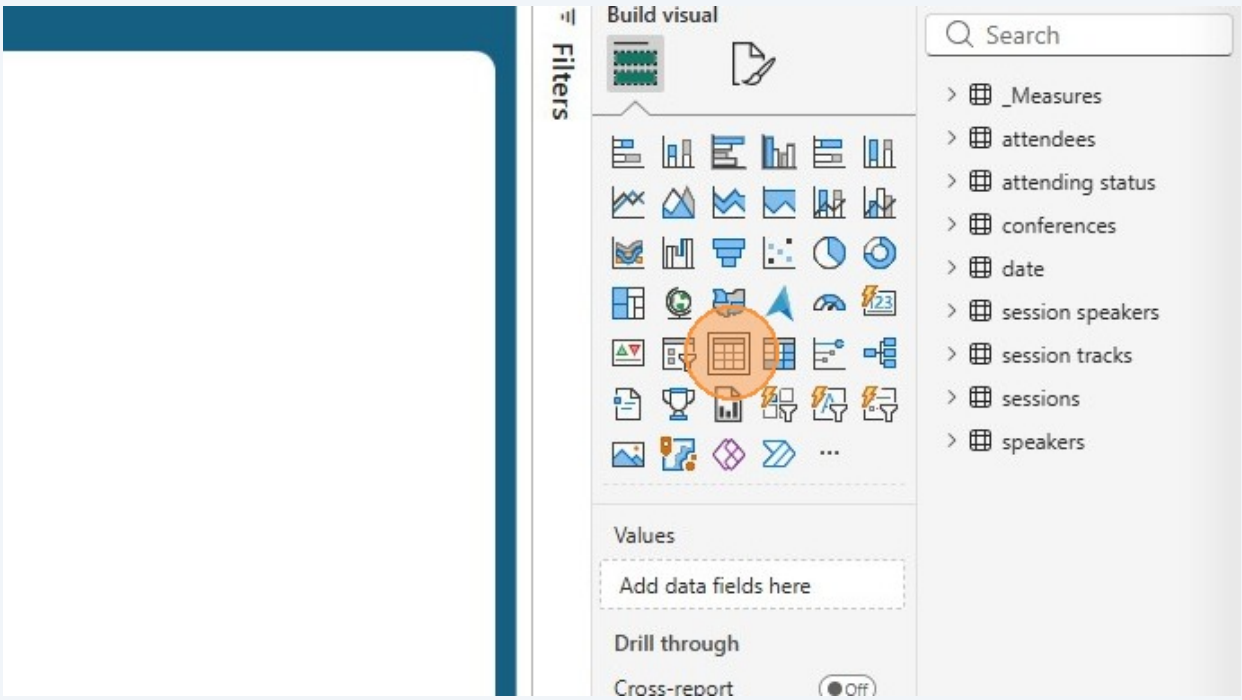
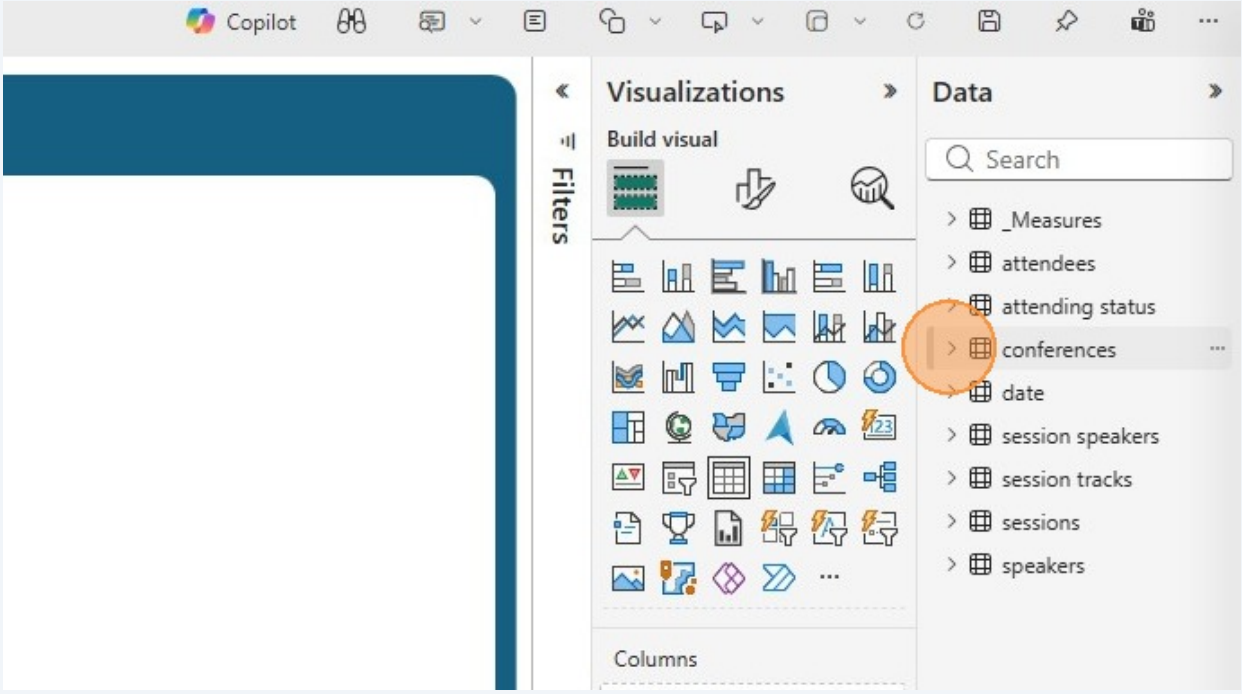
5b. Quick EDA & Filtering Required Data

Training.tips

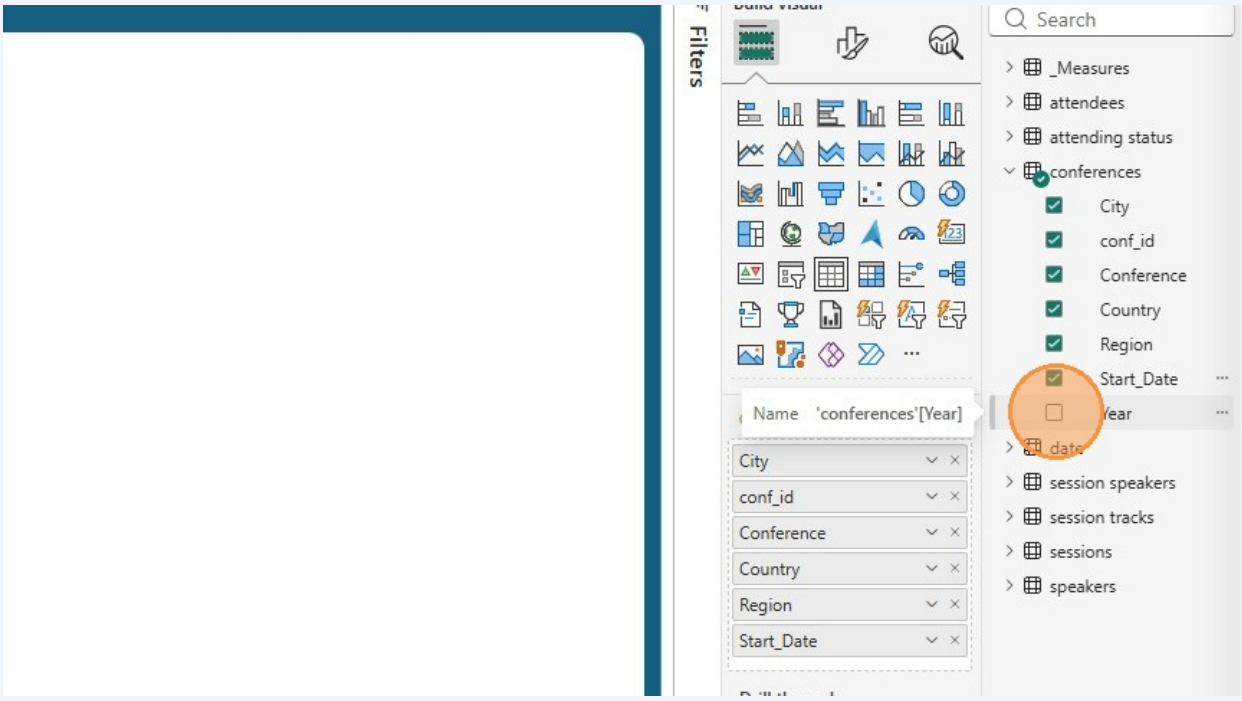
1 Choose the **Table Visual** from the Visualization Pane.



2 Expand the **conferences** table



3 Select all the **columns** from the conferences table



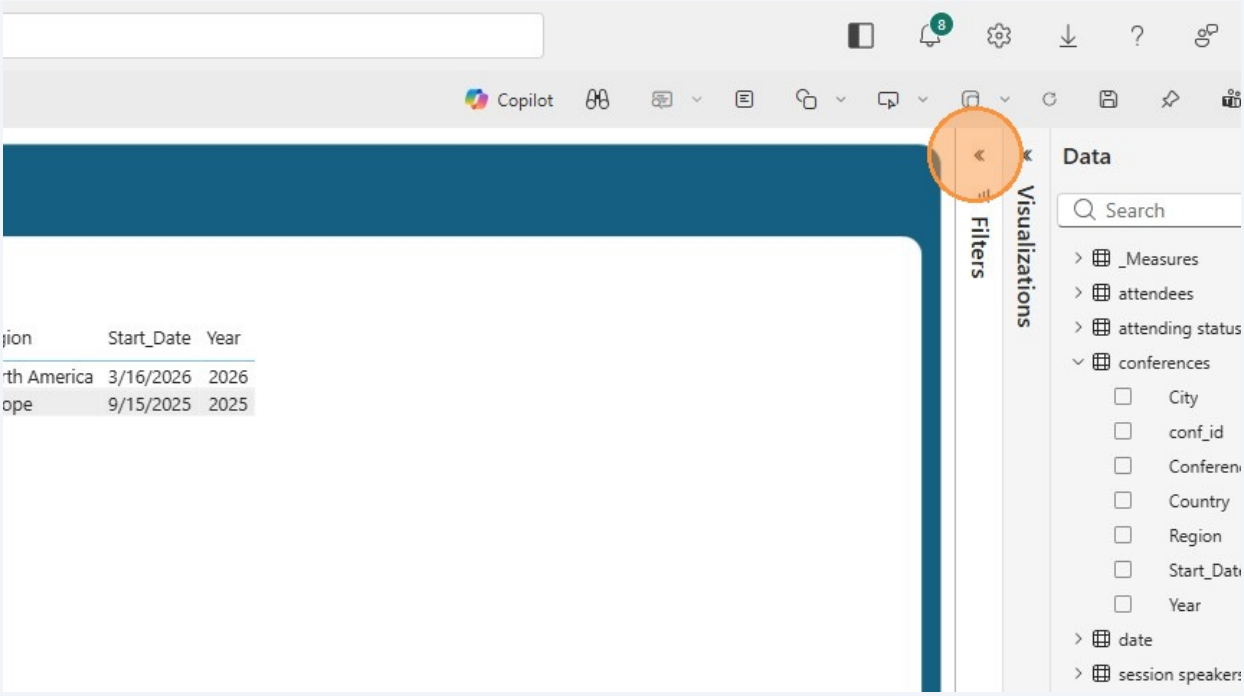
4 This is what you'll see.

City	conf_id	Conference	Country	Region	Start_Date	Year
Atlanta	2000	FabCon US 2026	USA	North America	3/16/2026	2026
Vienna	1000	FabCon Europe 2025	Austria	Europe	9/15/2025	2025

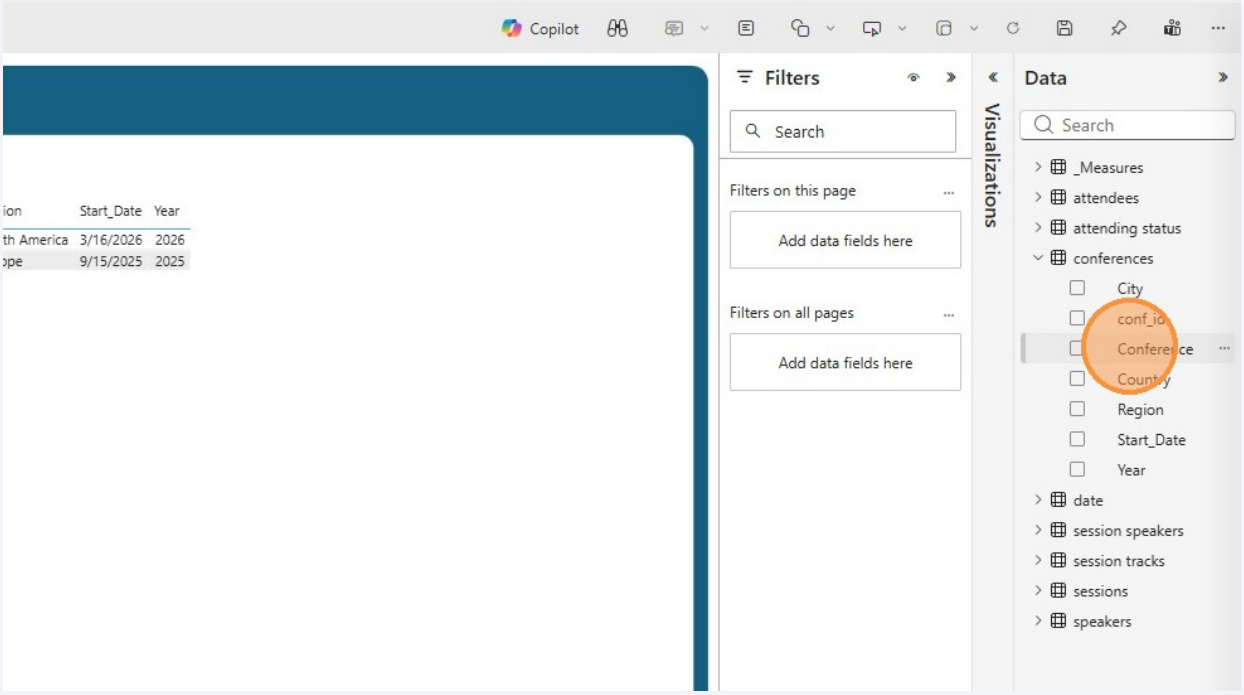
Do you notice how we have data from 2 conferences? FabCon Vienna and FabCon Atlanta. Let's now learn how to filter out data so that we can only view the **Fabcon US 2026** data.

Filter Required Data

5 Expand the **Filters Pane**

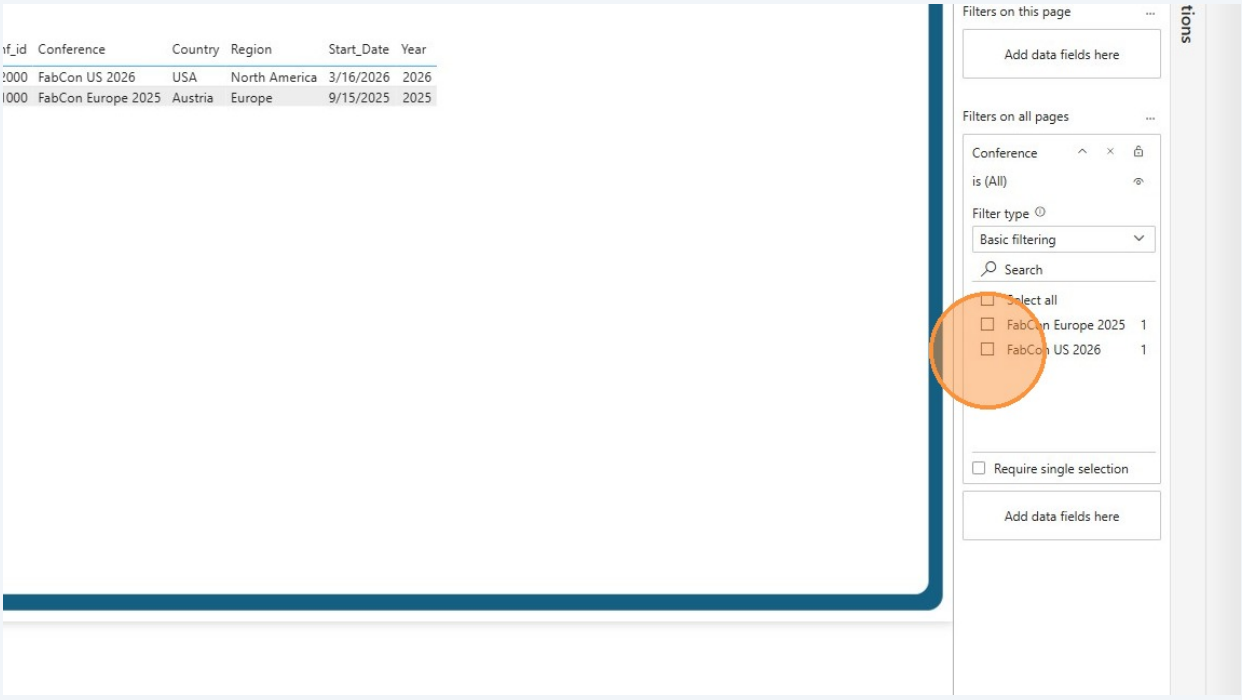


6 Drag the **Conference column** from the conferences table to **Filters on all pages** section of the filter pane.

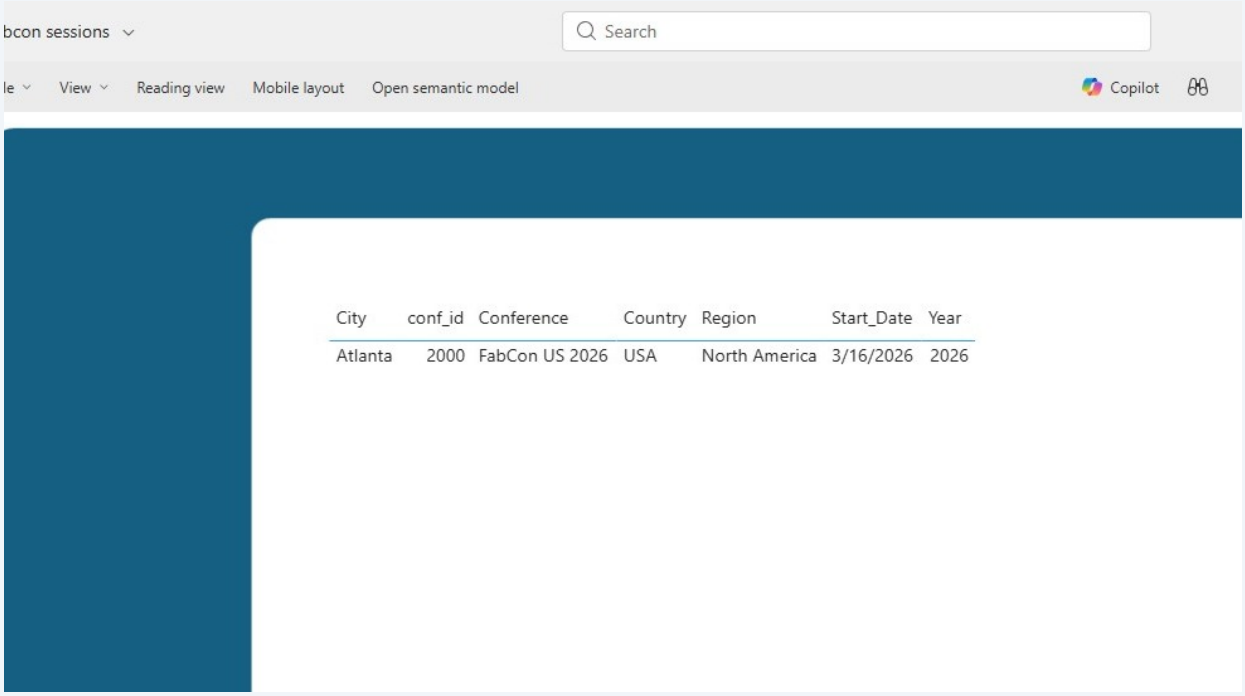


The Filter Pane typically has 3 types of filters- Visual level, Page level and Report level. In our case, we use the Report level filter because we want to apply the filter on all our report pages.

7 After dragging the Conference column, go ahead and select the **FabCon US 2026** option.



8 You will see that the table visual now show only the data for FabCon US 2026.



Feel free to explore the data in all the tables by following the same method. Choose a table visual and select all the columns to view the data.
